

## Knowledge Rich Curriculum Plan

Year 10 Higher - Ratio and Proportion

		The Sutton Academy				
Lesson	Intended Knowledge:	Tiered Vocabulary	Prior Knowledge:	Steps to Success:	Feedback	
To learn how to	•Students will know how to share a quantity into a two-part given ratio.	Ratio - a way of	•Students will know	Steps to Success – Sharing an amount into a ratio		
share an	• Students will know how to share a quantity into a three-part given ratio.	representing the	how to simplify	<b>Step 1:</b> Represent the parts of the ratio in the form of boxes – remember to		
amount into a	•Students will know how to find quantities within a ratio when the	relationship	ratios in their	assign the ratio in the order of the question.		
ratio.	difference between two parts is given.	between two	simplest form.	<b>Step 2:</b> Count the number of the part. Divide the total amount by the number		
	• Students will know how to solve ratio problems with context.	amounts	•Students will know	of parts. This will give you the amount that each part is worth.		
	•Students will know how to solve more complex ratio problems including	Share – split up	how to simplify	Step 3: Write the value of each part within the box.		
	those which involve percentages and fractions.	between parts	ratios in the form of	Step 4: Calculate the totals for each section of the ratio.		
	those which involve percentages and fractions.	'	1:norn:1.	Step 5: Check that you have answered the question. You may only need to		
			1.110111.1.	state one amount rather than every amount.		
				Steps to success: Ratio - Given one quantity		
				Step 1: Represent the parts of the ratio in the form of boxes – remember to		
				assign the ratio in the order of the question.		
				<b>Step 2</b> : If you are given one value divide the amount by the number of parts		
				for the person it is referring to.		
				Step 3: Write the value of each part within the box		
				Step 4: Calculate the totals for each section of the ratio.		
				Step 5: Check if the question is asking for one value or for the total amount.		
				Steps to success: Ratio – Given the difference		
				Step 1: Represent the parts of the ratio in the form of boxes – remember to		
				assign the ratio in the order of the question.		
				Step 2: Count the difference in the number of the parts. Divide the difference		
				by the difference in the number of parts. This will give you the amount that		
				each part is worth.		
				· ·		
				Step 3: Write the value of each part within the box.		
				Step 4: Calculate the totals for each section of the ratio.		
		0 11		Step 5: Check if the question is asking for one value or for the total amount.		
To learn how to	•Students will know how to combine ratios and use them for comparison	Combine – merge	•Students need to	Steps to Success - Combining ratios		
solve harder	between three parts.	together	know how to find	<b>Step 1:</b> Identify the common element between the two ratios.		
ratio problems.	•Students will know how to combine ratio to express part of the ratio as a		the LCM of two	Step 2: Find the LCM of the two parts that are in common.		
	fraction.		numbers.	<b>Step 3:</b> Multiply both ratios in order to make the parts in common equal.		
	•Students will know how to combine ratios to share an amount into the			Step 4: Combine the two ratios, simplify if possible.		
	new ratio.			<b>Step 5:</b> Check if the question is asking to share between the combined ratio,		
	Opportunity for challenge:			the simplified combined ratio or a different ratio.		
	•Students will know how to solve ratio problems involving algebraic terms.					
To learn how to	• Students will know how to find the best value for money between 2 or 3	Value – how much	• Students will need	Steps to Success – The best value for money		
solve real life	given values.	money something is	to know how to find	Method 1 – Finding the price of one item		
problems	• Students will know how to find the best value for money where a	worth	the LCM of two	<b>Step 1:</b> Divide the cost by the amount. You must show all of your working.		
involving direct	conversion in money is needed. E.g. One given in pounds and one given	Currency – a system	numbers.	Step 2: Write down the full answers and do not round anything.		
and inverse	in pence.	of money in general	Students need to	Step 3: Pick the smallest value.		
proportion.	• Students will know how to find the best value for money where a	use in a particular	know how to	<b>Step 4:</b> Remember to write the name of the item that is the best value for		
	conversion in the amount is needed. E.g. One is given in ml and one in	country	multiply and divide	money.		
	litres.	Convert – change a	decimals.	Method 2 – Finding the LCM of each item		
	Students will know how to find the best value for money in more	value from one form	accilliuis.	Step 1: Find the lowest common multiple of each quantity. Write down all of		
	,	to another		your working.		
	complex scenarios where percentage discounts or fractions are also	Direct Proportion –if		Step 2: Multiply the cost of each item in order to get the LCM quantity of each		
	involved.	one number		item, this is so you can compare.		
	Students will know how to convert between different currencies.	increases, then so		Step 3: Pick the smallest value.		
		micreases, then so		Step 3. Fick tile silialiest value.		

Lesson	Intended Knowledge:	Tiered Vocabulary	Prior Knowledge:	Steps to Success:	Feedback		
	Students will know how to solve problems involving the conversion of	does the other or if		Step 4: Remember to write the name of the item that is the best value for			
	different currencies.	one decreases then		money.			
	Students will know how to solve real life problems involving direct	so does the other		Steps to Success – Currency conversion			
	proportion including money problems.	Inverse – Opposite		Step 1: Highlight the exchange rate given in the question.			
	Students will know how to solve real life problems involving inverse	Inverse Proportion –		Step 2: Establish which way you are using the exchange rate. Are you going to			
	proportion without using algebra (e.g. number of worker problems etc.).	if one number		multiply or divide?			
		increases, then the		Step 3: Carry out the calculation.			
		other number		Steps to Success - Direct Proportion			
		decreases or vice		Step 1: Divide each value by the number of items that is equal to it. This will			
		versa		get the value for 1 person/item.			
		Cultural capital		<b>Step 2:</b> Multiply the amount for 1 person/item by the amount you need.			
				Steps to Success - Inverse Proportion			
				Step 1: Multiply each value by the number of items that is equal to it. This will			
				get the time for 1 worker/machine.			
				<b>Step 2:</b> Divide the time for 1 worker/machine by the amount you need.			
				Double check that your answer makes sense for what is being asked.			
To learn how to	•Students will know how to set up a direct proportion equation.	Constant – a	<ul> <li>Students need to</li> </ul>	Steps to Success – Algebraic direct proportion			
solve algebraic direct proportion problems.	• Students will know how to find the constant of proportion.	quantity that does	know how to	If $y$ is directly proportional to $x$ , this can be written as $y \propto x$			
	•Students will know how to use the equation of direct proportion to find	not change its value	substitute numbers	An equation of the form $y = kx$ represents direct proportion, where $k$ is the			
	other values.		into formulae.	constant of proportionality.			
	• Students will know how to solve algebraic direct proportion problems		<ul> <li>Students need to</li> </ul>	<b>Step 1:</b> Write out the equation y = kx, attaching the appropriate power to the			
	involving powers and roots.		know how to solve	'x' and using the <b>variables</b> given in the question.			
	Opportunity for challenge:		linear equations	Step 2: Substitute in the given values.			
	•Students will know how to solve algebraic direct proportion problems		involving squares	Step 3: Solve the resulting equation to find k.			
	where two equations are needed.		and roots.	Step 4: Rewrite the equation with the value for k.			
				<b>Step 5:</b> Substitute in the given value to find the missing variable the question			
				asks for.
