

The Sutton Academy

Knowledge Rich Curriculum Plan

Year 10 Higher+ Geometry 2

Lesson/Learning Sequence	Intended Knowledge: <i>Students will know that...</i>	Tiered Vocabulary	Steps to Success	Prior Knowledge: <i>In order to know this...</i>	Feedback
To learn how to solve problems involving perimeter and area	<ul style="list-style-type: none"> Students will know how to solve problems involving perimeter and area of compound shapes (not including trapezia) 	<p>Perimeter – the distance around the outside of a shape</p> <p>Area – the amount of space inside a 2D shape</p>	<p>Steps to Success – Perimeter To calculate the perimeter, add the length of all of the sides together. Remember even if there are only two measurements on the shape if it has 4 sides you will need to add 4 numbers.</p> <p>Steps to Success – Perimeter of compound shapes Step 1: Firstly, identify whether or not you need to find any missing lengths, if it is necessary subtract the smaller length from the larger length. Step 2: Add up the lengths of all the sides. Step 3: Don't forget to write your units – cm or mm or m.</p> <p>Steps to Success – Area of shapes Step 1 – Identify the formula from the list needed:</p> <ul style="list-style-type: none"> Area of a Square/Rectangle = Base x Height Area of a Parallelogram = Base x Height Area of a Triangle = $\frac{1}{2}$ x Base x Height <p>Step 2 – Substitute the measurements into the required formula. Step 3 – Don't forget to write your units cm^2 or mm^2 or m^2.</p>	<ul style="list-style-type: none"> Students should already know how to calculate the perimeter of a compound shape Students should already know how to calculate the area of rectangles, squares, parallelograms and triangles 	Exam Prep 6
To learn how to calculate the area of a trapezium	<ul style="list-style-type: none"> Students will know that the formula for the area of a trapezium is $\frac{1}{2}(a + b)h$ where a and b are the parallel sides and h is the height of the trapezium Students will know how to calculate the area of a trapezium Students will know how to calculate the area of compound shapes involving trapezia Students will know how to solve worded problems involving the area of a trapezium Students will know how to work backwards to find missing lengths given the area of a trapezium 	<p>Trapezium – a quadrilateral with one pair of sides parallel.</p> <p>Quadrilateral – a four-sided shape</p>	<p>Steps to Success – Area of trapezia $\frac{1}{2}(a+b)h$ Step 1: Label your trapezium, a and b are the parallel lengths of your trapezium and h is the perpendicular height. Step 2: Substitute a, b and h into the formula $\frac{1}{2}(a + b)h$. Step 3: Calculate using BIDMAS. Step 4: Don't forget to write your units - cm^2 or mm^2 or m^2. To calculate the missing sides of a trapezia, the inverse operations of $\frac{1}{2}(a + b)h$ will be used.</p> <p>Steps to Success – Area of compound shapes Step 1: Firstly, identify whether or not you need to find any missing lengths, if it is necessary</p>	<ul style="list-style-type: none"> Students should already know how to substitute numbers into formulae 	Exam Prep 6

			subtract the smaller length from the larger length. Step 2: Divide the compound shape into smaller shapes, and calculate the area of each individual shape. Step 3: To find the total area of the compound shape, add the area of the individual shapes together. Step 4: Don't forget to write your units - cm^2 or mm^2 or m^2 .		
To learn how to solve problems involving the circumference of a circle	<ul style="list-style-type: none"> Students will know how to calculate the perimeter of semi circles and understand why they have to add the diameter. Students will know how to calculate the perimeter of quarter circles or three quarters of a circle Students will know how to use inverse operations to find the missing radius or diameter when given the circumference. Students will know how to solve problems involving circumference of circles. 	Circumference – perimeter of a circle Radius – a straight line from the centre to the circumference of a circle or sphere Diameter – a straight line passing from side to side through the centre of a body or figure, especially a circle or sphere Arc – a part of a curve, a part of the circumference of a circle	Steps to Success: Circumference of a circle Step 1: Find the diameter of your circle, if you are given the radius, double it to find the diameter. Step 2: Substitute your diameter into the formula – $\pi \times d$ Step 3: Type your calculation in the calculator. Step 4: Write your answer from the calculator, check to see if the question wants you to round or answer in terms of π . Steps to Success: Circumference of a semi-circle/quarter circle Step 1: Find the diameter of your circle, if you are given the radius, double it to find the diameter. Step 2: Substitute your diameter into the formula – $\pi \times d$ Step 3: Divide the circumference of the circles by 2 for semi circle, 4 for quarter of a circle. Step 4: Add the diameter onto the circumference of the semi circle	<ul style="list-style-type: none"> Students should already know how to calculate circumference 	Exam Prep 6
To learn how to calculate the arc length and perimeter for a sector	<ul style="list-style-type: none"> Students will know how to calculate the arc length of the sector using the formula $\text{angle}/360 \times \pi \times \text{diameter}$ Students will know how to calculate the perimeter of the sector using the formula $\text{angle}/360 \times \pi \times \text{diameter} + 2r$ Students will know how to calculate the angle of a sector using inverse operations 	Arc – a part of a curve, a part of the circumference of a circle	Steps to Success: Arc length of a sector Step 1: Identify the diameter, if given the radius multiply the measurement by 2 Step 2: Substitute your angle and diameter into the formula – $\frac{\text{Angle of sector}}{360} \times \pi d$ Step 3: Type your calculation in the calculator.	<ul style="list-style-type: none"> Students will need to know how to find fractions of amounts Students will need to know that the angles around a point add to 360 Students will need to know how to calculate the circumference of a circle 	Exam Prep 6

To learn how to calculate the area of a sector	<ul style="list-style-type: none"> Students will know how to calculate the area of a sector where the angle is not 90, 180 or 270 using the formula, $\text{angle}/360 \times \pi r^2$, students will also be able to recall this formula. Students will know how to calculate the angle of a sector using inverse operations 	Sector – the area in a circle formed by two radii and an arc	<p>Steps to Success – Area of a Sector</p> <p>To calculate the area of a sector you need to find the fraction of the circle that you have, this is the same as the angle in the sector divided 360 degrees. You then multiply the fraction by the area of the circle.</p> <p>The formula for the area of a sector is: $\frac{\theta}{360} \times \pi r^2$</p>	<ul style="list-style-type: none"> Students will need to know how to find fractions of amounts Students will need to know that the angles around a point add to 360 Students will need to know how to calculate the area of a circle 	Exam Prep 6
To learn how to solve problems in 2D shapes using Pythagoras' Theorem	<ul style="list-style-type: none"> Students will know how to find missing lengths in a right-angled triangle using Pythagoras' theorem Students will know that to prove a triangle is right angled using Pythagoras' theorem they will substitute the values into the formula. Students will know how to solve worded problems using Pythagoras' theorem Students will know how to solve problems involving multiple connected right-angled triangles using Pythagoras' theorem 	Hypotenuse – the longest side in a right-angled triangle. It can always be found opposite the right angle	<p>Steps to Success: Using Pythagoras' Theorem to find the hypotenuse.</p> <p>Step 1: In order to find the missing side of a triangle using Pythagoras' theorem, we need to work out which side corresponds to each of the letters a, b and c in the equation $a^2+b^2=c^2$, remembering that the longest side is the hypotenuse which is known as c. a and b will be either one of the two perpendicular sides.</p> <p>Step 2: Label your diagram.</p> <p>Step 3: Next we substitute the values into the equation $a^2+ b^2= c^2$</p> <p>Step 4: Calculate the square numbers and then add the values (BIDMAS).</p> <p>Step 5: Don't forget to square root your value to get the length of the side.</p> <p>Step 6: Round your answer to an appropriate degree of accuracy if necessary.</p> <p>Step 7: Check that your answer looks right. Is the hypotenuse the longest side?</p> <p>Steps to Success: Using Pythagoras' Theorem to find one of the perpendicular sides.</p> <p>Step 1: In order to find the missing side of a triangle using Pythagoras' theorem, we need to work out which side corresponds to each of the letters a, b and c in the equation $a^2+b^2=c^2$, remembering that the longest side is the hypotenuse which is known as c. a and b will be either one of the two perpendicular sides.</p> <p>Step 2: Label your diagram.</p> <p>Step 3: Next we substitute the values into the equation $a^2+ b^2= c^2$</p>	<ul style="list-style-type: none"> Students should already know how to calculate missing lengths using Pythagoras' theorem Students will need to know how to rearrange formulae
