

The Sutton Academy

# Knowledge Rich Curriculum Plan

Year 8 Prime –Perimeter and Area

Lesson/Learning Sequence	Intended Knowledge: <i>Students will know that...</i>	Tiered Vocabulary	Prior Knowledge: <i>In order to know this students, need to already know that...</i>	Assessment
<b>To learn how to calculate the perimeter of 2D shapes.</b>	<ul style="list-style-type: none"> <li>• Students will know that perimeter is the distance around the shape.</li> <li>• Students will know that for perimeter you find the sum of the lengths of each side including any value not immediately show on the shape.</li> <li>• Students will know that the units used to represent perimeter are mm, cm and m etc.</li> <li>• Students will know that perimeter is a measurement of length.</li> <li>• Students will know how to calculate the perimeter of a rectangle.</li> <li>• Students will know how to calculate the perimeter of a triangle.</li> <li>• Students will know how to calculate the perimeter of a trapezium.</li> <li>• Students will know how to calculate the perimeter of a parallelogram.</li> <li>• Students will know how to calculate the perimeter of special triangles.</li> <li>• Students will know that compound shapes are shapes made up more than one shape.</li> <li>• Students will know how to calculate the perimeter of compound shapes.</li> <li>• Students will know how to solve real life problems involving perimeter.</li> <li>• Students will know how to use inverse operations to find the missing lengths of shapes when given the perimeter.</li> </ul>	<p><b>Perimeter</b> – the distance around the outside of a shape</p>	<ul style="list-style-type: none"> <li>• Students need to know the properties of 2D polygons.</li> <li>• Students need to know how to add and subtract numbers.</li> <li>• Students need to know the different metric units used to measure length.</li> <li>• Students need to know how to convert between different lengths.</li> </ul>	Mini-Assessment 9
<b>To learn how to calculate the area of rectangles, triangles and parallelograms.</b>	<ul style="list-style-type: none"> <li>• Students will know that area is the space inside the shape.</li> <li>• Students will know that the units used to represent area are <math>mm^2</math>, <math>cm^2</math> and <math>m^2</math> etc.</li> <li>• Students will know how to calculate the area rectangles using the formula <math>A = length \times width</math>.</li> <li>• Students will know to ignore any additional lengths in the rectangle.</li> <li>• Students will know how to calculate the area of a triangle using the formula <math>A = \frac{1}{2} base \times height</math>.</li> <li>• Students will know that the base and height are perpendicular to each other in every triangle.</li> <li>• Students will know that the reason we divide by 2 when finding the area of a triangle is because the <math>base \times height</math> would give the area of a rectangle which is double the triangle.</li> <li>• Students will know to ignore any additional lengths in the triangle.</li> <li>• Students will know how to calculate area of a parallelogram using the formula <math>A = base \times height</math>.</li> <li>• Students will know to ignore any additional lengths in the parallelogram.</li> <li>• Students will know that the base and height are perpendicular to each other in every parallelogram.</li> <li>• Students will know how to use inverse operations to find the missing lengths of shapes when given the area.</li> <li>• Students will know how to solve real life problems involving area.</li> </ul>	<p><b>Area</b> – the amount of space inside a 2D shape <b>Quadrilateral</b> – a four-sided shape</p>	<ul style="list-style-type: none"> <li>• Students need to know the properties of 2D polygons.</li> <li>• Students need to know how to multiply numbers.</li> <li>• Students need to know how to divide by 2.</li> </ul>	Mini-Assessment 9
<b>To learn how find the area of compound shapes and trapezia.</b>	<ul style="list-style-type: none"> <li>• Students will know how to calculate the area of compound shapes, by separating them in to rectangles or triangle and finding the sum of the areas of each individual shape.</li> <li>• Students will know how to identify the parallel lines in a trapezium.</li> <li>• Students will know how to calculate the area of a trapezium using the formula <math>A = \frac{1}{2} (a + b) \times height</math>, where a and b are the parallel sides of the trapezium.</li> <li>• Students will know how to use inverse operations to find the missing sides of a compound shape.</li> </ul>	<p><b>Trapezium</b> – a quadrilateral with one pair of sides parallel.</p>	<ul style="list-style-type: none"> <li>• Students need to know how to find the area of rectangles.</li> <li>• Students need to know how to find the area of triangles.</li> <li>• Students need to know how to calculate using the order of operations.</li> <li>• Students need to know how to divide by 2.</li> <li>• Students need to know how to substitute in to a formula.</li> </ul>	Mini-Assessment 9

Lesson/Learning Sequence	Intended Knowledge: <i>Students will know that...</i>	Tiered Vocabulary	Prior Knowledge: <i>In order to know this students, need to already know that...</i>	Assessment
<p><b>To learn how to find the circumference of a circle.</b></p>	<ul style="list-style-type: none"> <li>• Students will know how to use inverse operations to find the height or missing side of a trapezium.</li> <li>• Students will know how to calculate the circumference of a circle using the formula <math>C = \pi d</math>, where d is the diameter.</li> <li>• Students will know how to find the circumference of a circle where only the radius is given by using the formula <math>C = 2\pi r</math>, where r is the radius or by finding the diameter by multiplying the radius by 2 and then using the formula <math>C = \pi d</math>.</li> <li>• Students will know how to find the circumference of a circle when the diameter or radius is known. (mixture)</li> <li>• Students will know how to calculate the circumference of a circle, without a calculator, giving their answer in terms of <math>\pi</math>.</li> <li>• Students will know how to calculate the perimeter of a semi-circle by finding the circumference, dividing it by 2 and adding the diameter.</li> <li>• Students will know how to calculate the perimeter of a quarter circle by finding the circumference, dividing it by 4 (or multiply by <math>\frac{1}{4}</math>) and adding both radii.</li> <li>• Students will know how to calculate the perimeter of a three-quarter circle finding the circumference, dividing it by 4, multiplying by 3 (or multiply by <math>\frac{3}{4}</math>) and adding the radii.</li> <li>• Students will know how to solve problems involving the circumference of circles.</li> </ul>	<p><b>Circumference</b> – the perimeter of a circle  <b>Perimeter</b> – the distance around the outside of a shape  <b>Arc</b> – a part of a curve, a part of the circumference of a circle  <b>Radius</b> – a straight line from the centre to the circumference of a circle or sphere  <b>Diameter</b> – a straight line passing from side to side through the centre of a body or figure, especially a circle or sphere</p>	<ul style="list-style-type: none"> <li>• Students need to know how to round to a given decimal place or significant figure.</li> <li>• Students need to know that multiplying the radius by 2 will give the length of the diameter.</li> <li>• Students need to know that dividing the diameter by 2 will give the length of the radius.</li> <li>• Students need to that the number <math>\pi</math> is an irrational mathematical constant.</li> <li>• Students need to know that <math>\pi = 3.14 \dots</math></li> <li>• Students need to know how to type the <math>\pi</math> symbol on to a calculator. Students need to know how to round to a given decimal place or significant figure.</li> <li>• Students need to know that multiplying the radius by 2 will give the length of the diameter.</li> <li>• Students need to know that dividing the diameter by 2 will give the length of the radius.</li> <li>• Students need to that the number <math>\pi</math> is an irrational mathematical constant.</li> <li>• Students need to know that <math>\pi = 3.14 \dots</math></li> <li>• Students need to know how to type the <math>\pi</math> symbol on to a calculator.</li> </ul>	<p>Mini-Assessment 9</p>
<p><b>To learn how to find the area of a circle.</b></p>	<ul style="list-style-type: none"> <li>• Students will know how to calculate the area of a circle using the formula <math>A = \pi r^2</math>, where r is the radius.</li> <li>• Students will know how to calculate the area of a circle when a diameter is given by using the formula <math>A = \pi(\frac{d}{2})^2</math>, where d is the diameter or by dividing the diameter by 2 and using the formula <math>A = \pi r^2</math>.</li> <li>• Students will know how to find the area of a circle when the diameter or radius is known. (mixture)</li> <li>• Students will know how to calculate the area of a circle, without a calculator, giving their answer in terms of <math>\pi</math>.</li> <li>• Students will know how to calculate the area of a semi-circle by finding the area of the circle and dividing it by 2.</li> <li>• Students will know how to calculate the area of a quarter circle by finding the area of the circle and dividing it by 4 (or multiply by <math>\frac{1}{4}</math>).</li> <li>• Students will know how to calculate the area of a three-quarter circle finding the area dividing it by 4 and multiplying by 3 (or multiply by <math>\frac{3}{4}</math>).</li> <li>• Students will know how to solve problems involving the area of circles.</li> </ul>	<p><b>Radius</b> – a straight line from the centre to the circumference of a circle or sphere  <b>Diameter</b> – a straight line passing from side to side through the centre of a body or figure, especially a circle or sphere</p>	<ul style="list-style-type: none"> <li>• Students need to know how to round to a given decimal place or significant figure.</li> <li>• Students need to know that multiplying the radius by 2 will give the length of the diameter.</li> <li>• Students need to know that dividing the diameter by 2 will give the length of the radius.</li> <li>• Students need to that the number <math>\pi</math> is an irrational mathematical constant.</li> <li>• Students need to know that <math>\pi = 3.14 \dots</math></li> <li>• Students need to know how to type the <math>\pi</math> symbol on to a calculator.</li> </ul>	<p>Mini-Assessment 9</p>

Lesson/Learning Sequence	Intended Knowledge: <i>Students will know that...</i>	Tiered Vocabulary	Prior Knowledge: <i>In order to know this students, need to already know that...</i>	Assessment
<b>To learn how to calculate missing sides using Pythagoras' Theorem.</b>	<ul style="list-style-type: none"> <li>• Students will know how to find the hypotenuse, using Pythagoras' theorem</li> <li>• Students will know that the hypotenuse is the longest side in a right-angled triangle.</li> <li>• Students will know how to find the shorter sides of the triangle using Pythagoras' theorem. Students will know that they subtract when finding the shorter side.</li> <li>• Students will know how to identify whether they need to add or subtract when using Pythagoras' theorem. They will know that it is important to label the sides.</li> </ul>	<p><b>Hypotenuse</b> – the longest side in a right-angled triangle. It can always be found opposite the right angle</p> <p><b>Theorem</b> – a statement that has been proved, or can be proved</p>	<ul style="list-style-type: none"> <li>• Students need to be able to identify right angled triangles.</li> <li>• Students need to be able to use basic mathematical operations.</li> <li>• Students need to be able to solve equations.</li> <li>• Students need to be able to square and square root numbers.</li> </ul>	Mini-Assessment 9
<b>To learn how to solve problems using Pythagoras' Theorem.</b>	<ul style="list-style-type: none"> <li>• Students will know how to use Pythagoras' Theorem to solve problems involving perimeter or area.</li> </ul>		<ul style="list-style-type: none"> <li>• Students need to know how to use Pythagoras' Theorem.</li> </ul>	Mini-Assessment 9
<b>To learn how to calculate missing sides in right-angled triangles using trigonometry.</b>	<ul style="list-style-type: none"> <li>• Students will know the trigonometric ratio sine, cosine and tan.</li> <li>• Students will know how to label the sides of a right-angled triangle; hypotenuse, opposite, adjacent. Students will know hypotenuse to mean, the longest side of a right-angled triangle, opposite to be the side opposite the angle in the question and adjacent being the side next to the angle.</li> <li>• Students will know how to identify the correct trigonometric ratio, by eliminating the side that they do not need.</li> <li>• Students will know how to use the correct trigonometric ratio to find the missing side in a triangle.</li> </ul>	<p><b>Trigonometry</b> – a branch of mathematics that studies relationships between side lengths and angles of triangles</p> <p><b>Hypotenuse</b> – the longest side in a right-angled triangle. It can always be found opposite the right angle</p> <p><b>Adjacent</b> – next to, in maths the adjacent side in a right-angled triangle is the side that is adjacent to the angle, forming the angle with the hypotenuse</p> <p><b>Opposite</b> – for right angled triangles the opposite is the side opposite the angle that we know or are trying to find.</p>	<ul style="list-style-type: none"> <li>• Students need to be able to rearrange equations.</li> <li>• Students need to know that Pythagoras is used when the problem includes three sides.</li> </ul>	Mini-Assessment 9
<b>To learn how to calculate missing angles in right-angled triangles using trigonometry.</b>	<ul style="list-style-type: none"> <li>• Students will know that to calculate the missing angle in a right-angled triangle using trigonometry they will use the inverse operation.</li> </ul> <p><b>Opportunity for challenge:</b></p> <ul style="list-style-type: none"> <li>• Students will know how to use trigonometry to solve problems involving perimeter or area.</li> </ul>		<ul style="list-style-type: none"> <li>• Students need to know how to find the missing sides of a right-angled triangle using trigonometry and Pythagoras' theorem.</li> </ul>	Mini-Assessment 9
